

# Sustainable Florida Initiative

[www.fleng.org/sustainable.cfm](http://www.fleng.org/sustainable.cfm)

The Florida Engineering Society (FES) and the Florida Institute of Consulting Engineers' (FICE) **Engineering a Sustainable Florida** initiative is to promote Florida's most sustainable engineering projects, products, programs and processes, and the role of engineering in ensuring protection of our environment, a strong economy, and our social well-being.

The initiative includes:

- a website
- seminars
- media articles, and
- public speaking forums

We would appreciate enlisting your participation by recognizing your sustainable engineering contributions to our state.

**It's easy to participate.** Just follow the format about your sustainable engineering project, product, program or process in the state of Florida, including speaker contact information to facilitate promotional opportunities at public forums. The *FES Journal* highlights sustainable engineering with an article in the environmental issue.

The first 100 postings received will be free for one year subsequent to posting for FES/FICE members in the private sector, and only \$100 for non-members in the private sector. Postings will be free for both public agencies and non-profit organizations. Other website service costs and sponsorship opportunities are also available. Postings include the capability of a web link to your website for additional information.

Our future will be shaped by engineering. Highlighting our most sustainable engineering will encourage others to design the best. Thank you for participating in Engineering a Sustainable Florida.

Questions? Please call Debbie Hall at 850-224-7121 or by e-mail at [dhall@fleng.org](mailto:dhall@fleng.org).

# Engineering a Sustainable Florida

Sustainable Projects, Products, Programs, Processes Template

Name of the Project, Product, Program, or Process

Name of the Engineer, Firm, or Agency Submitting the Tem

**Location:** Identification of physical address, city, county, or statewide

**Abstract:** 250 words maximum

**Detailed Description:**

How it contributes to a sustainable Florida: environmental health, economic, and social well-being

Key engineering considerations and design elements

Design development process, stakeholder collaboration, regulatory agency/elected official dialogue—resultant design modifications

Energy saved, resources conserved, health risks reduced/avoided, public health benefits provided, environment protected, pollution prevented, history/heritage preserved, economic opportunities created, economic/health disparities eliminated, regional challenges addressed

Awards/recognitions/certifications
